YOUR PATIENT WITNESS

SPARTAN  
CAMERA

The **SPARTAN GoCam™ 3G Cellular** is a next-generation digital Black Flash (*no visible light when it takes a photos / videos at night*) cellular 3G camera trap that sends image activations instantly via email and / or MMS to any e-mail address and / or cell phone number (up to 4 of each) no matter what cellular network carrier SIM card is used in the camera trap – or what carrier the phone uses. For this reason, the SPARTAN GoCam™ 3G Cellular is ideal for both as a security and a wildlife camera.

With specifically designed Firmware in conjunction with CAMERA TRAPS cc (SOUTH AFRICA), the setup for this camera trap has been specially adapted to work seamlessly with South Africa's cellular network (as well as any other cellular network) and the units can easily be set up from any computer, in just minutes. There is no cellular contract required and if you want to use the camera as a standard camera trap – simply disable the cellular function (this can even be done remotely by sending the camera an SMS)!

Images sent instantly via MMS and / or e-mail

Video clips (5s or 10s) sent instantly via e-mail ONLY

Based on requirements compiled by a team of camera users with many years of scouting camera experience, the Spartan GoCam™ design focuses on durability, usability, and, above all, outstanding performance. The ultimate test of a trail camera is its performance. The Spartan GoCam™ features a fast trigger speed and the Black Flash LED array provides illumination to 25m and beyond for crisp, clear night images and videos. Photo resolution can be set as high as 8 MP, while video resolution can be as high as 720P HD.

Other notable features include;

1. Better image / video resolution.
2. Must faster transmission (sending) times (3-5 seconds).
3. Ability to now send 5s or 10s video clips via e-mail (1024x576 or 320x240 resolution).
4. New 3rd recording option (Photo + Video – Only Photo will be sent but the video clip will still be recorded onto the SD card).
5. A number of settings and the camera traps' status can be checked / changed remotely by sending specific SMS Commands to the camera traps. This is very advantageous and saves one having to physically go to the camera locations to check settings and status.
6. Built-in easy-to-read 2" image / video colour screen for viewing footage in the field.
7. Compatible metal security housing for added security from theft / damage (can also fit MasterLock Python Cable)
8. Eight large, well-marked buttons and ON/SETUP/OFF switch.
9. Uses 12 x AA batteries which provide several months of battery life. The batteries are arranged in two bays so that each battery has its own slot, thus eliminating the common problem of batteries unseating.
10. External 6V port to connect aux battery supply or solar panel for extended battery life.
11. USB port.
12. SD card slot on the left, with a large cutout to make it easy to insert or remove the SD card, which can be up to 32GB.
13. The setup menus are logical, well-organized, and easy to use.
14. It has an industry-leading 2-year warranty.
15. The camera can be set to overwrite the oldest photo on the SD card with the most recent if the SD card is full so you don't lose the most recent photos just because the SD card has filled.
16. If you don't want the camera to take pictures all the time, you can set one or two duty periods, each with different trigger intervals and time-lapse settings i.e. for one duty time, you can set the camera to trap to turn ON at say 17:00 and OFF at 06:30.
17. In order to provide excellent water resistance for outdoor use, there are flush case mating areas in both front and rear case halves. An oversized rubber gasket on the front case half, as well as an oversized double-hinged latch that is easily operated with gloved hands and ensure a complete water-resistant seal.
18. Compatible with a range of cellular booster antennas available from CAMERA TRAPS cc to assist with image transmission in areas with weaker cellular signal (from 3dBi to 11dBi gain).

PLEASE NOTE: If you are wanting the camera for security surveillance, face recognition will be the toughest part for any infrared / black flash trail camera. Night pictures greatly depend on how fast the subject is moving as to whether there will be blur or not. Overall, night pictures are good but don't expect a perfectly clear picture to prosecute someone with (unless they are completely still). Cellular cameras are best for alerting you immediately when someone is in a place they aren't supposed to be so you can respond to and intercept threats, not so much for prosecution.

With the fastest image transmission time on the market - The next-generation SPARTAN GoCam™ 3G Cellular is the leader...

The image information strip on the photos shows the date, time, moon phase, temperature, and battery level in a large, high-contrast white-on-black font that is easily readable on your cell phone screen without zooming.

## Photo Information

This letter will indicate what triggered the camera to take the photo.

**M** - Movement  
**T** - Time Lapse  
**S** - SMS / Real Time Request  
**E** - Manual Send / Scheduled event

These are the date and time the photo was taken

Moon phase

This is the temperature of the camera

On the bottom right of the photos there's a **P** with a number beside it

**P5** means the camera battery is at 5 Volts or higher

**P3** is battery getting low

**P1** and **P0** means your camera battery is almost out of Power

*Metal protection housing sold separately (CAMERA TRAPS cc)*

**The most sophisticated** wireless scouting camera solution.

OTHER AVAILABLE ACCESSORIES from CAMERA TRAPS cc

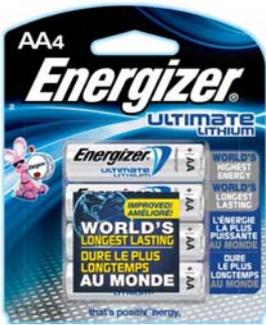

6V external sealed lead-acid battery (7Ah)

2m power cable for external battery (6V)

6V external solar panel

ENERGIZER 1.5V ULTIMATE Lithium AA batteries

SanDisk SD memory cards (16GB / 32GB)

MasterLock Python Cable for added security

Cellular signal booster antennas (3dB to 11dB)

Kind Regards

Chris Pearson
